

# Southern Maine Water Supply Resiliency

Saco River Water Treatment Facility Planning Decisions

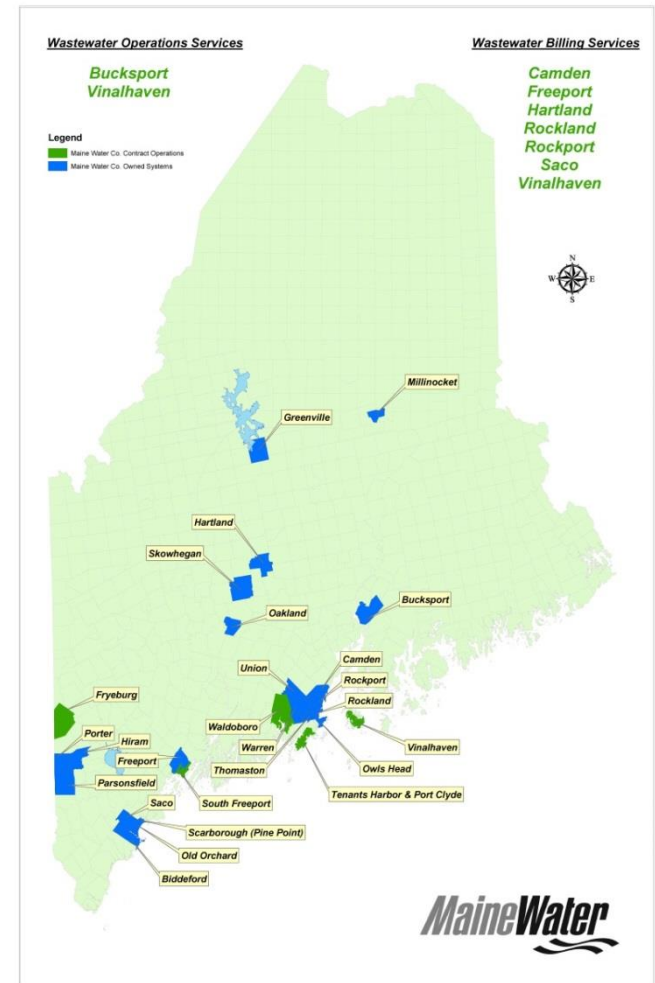

71<sup>st</sup> NECPUC Annual Symposium

May 21, 2018

# Background Info

## Maine Water Company

- 32,000 water customers in 21 municipalities
- Acquired the Biddeford Saco Water Company 2012
- Service started in 1884, serves Biddeford, Saco, Old Orchard Beach and Pine Point area of Scarborough
  - 16,000 connections, Population 40,000 +

# Background Info

## Southern Maine Regional Water Council

- 7 utility members from Portland to Kittery, serving over 30% of Maine's population
- October 2008 Regional Water System Master Plan Study  
<http://smrwc.org/pdfs/WaterMasterPlan.pdf>
- 2016 Update on Hydraulics, Water Quality and Local Issues

# Background Info – Water Source

## Saco River Facts

- 1700 square mile watershed in Maine and New Hampshire
- >2 billion gpd average flow
- Along with Sebago Lake, “the only sources identified as having sufficient quality and quantity to meet the projected needs of the southern Maine region”
- Enhanced protection from Saco River Corridor Commission
- 14 Dams (2 in NH, 12 in ME) control flow. Most licensed through FERC and owned by Brookfield Renewable Energy

# Background Info – Treatment Assets

- Major Rebuild in 1936
- 12 MGD Max Day Capacity
- 5 MGD Avg Day Production
- Operates in full SDWA compliance
- Flooded in 1935, 1936, 1953, 1955, 1987

*“The location of the facility within the floodplain is a serious threat to its long-term viability on the current site.”*

# Existing Water Treatment Facility

- \* 2013 Comprehensive System Facility Plan outlines South Street Water Treatment Facility condition:
  - \* Out of compliance with EPA Risk Management Program
  - \* Employee Health and Safety hazards
  - \* Lack of process control
  - \* Structural stability concerns in some areas
  - \* Investment recommendations:
    - \* \$800K Immediate
    - \* \$6.3 M Short Term (24-36 month)
    - \* \$1.9 M Mid Term (3-7 year)
    - \* \$12.9 M Long Term (7+ year)
  - \* \$21.9 M in Treatment Facility Rehabilitation

# Lifecycle Cost Analysis

| Item  | Net Present Value   |                     |
|---|---------------------|---------------------|
|   | Existing Facility   | New Facility        |
| <b>Capital Investment</b>                         | <b>\$21,875,000</b> | <b>\$26,000,000</b> |
| <b>Financing Costs</b>                            | <b>\$760,179</b>    | <b>\$418,065</b>    |
| <b>Lifecycle Operations and Maintenance Total</b> | <b>\$12,101,193</b> | <b>\$8,276,344</b>  |
| <i>Staffing</i>                                   | \$6,601,066         | \$4,125,666         |
| <i>Electrical</i>                                 | \$2,302,379         | \$1,841,903         |
| <i>Heating</i>                                    | \$255,820           | \$255,820           |
| <i>Chemicals</i>                                  | \$1,662,829         | \$1,413,405         |
| <i>Remaining Operations &amp; Maintenance</i>     | \$1,279,099         | \$639,550           |
| <b>Total LCC</b>                                  | <b>\$34,740,000</b> | <b>\$34,695,000</b> |

| Item                                 | Assumption |
|--------------------------------------|------------|
| Planning Horizon                     | 50 years   |
| Discount Rate                        | 10%        |
| Inflation                            | 2.4%       |
| Capital Loan Interest Rate – Present | 2%         |
| Capital Loan Interest Rate – Future  | 4%         |
| Capital Loan Term                    | 30 years   |

# Decision: Rehab or Replace?

- \* Operational Risks
  - \* Compliance, including construction phase
  - \* Climate Ready Resiliency, especially flood exposure
  - \* Timing (not if, but when?)
- \* Customer Rate Impacts
  - \* Capital cost, Operating costs
- \* Regional Service
  - \* Design capacity/Expansion potential to maintain future service options

# Resiliency and Reliability

- \* Judgement: What additional expertise should be incorporated into the project planning?
  - \* Proactive decision making is an added challenge
  - \* 30-50 year projections include significant assumptions
  - \* Independent engineering review?
- \* What's the public willingness to pay to mitigate obvious exposures? What's an acceptable level of risk?
  - \* EPA's CREAT model (Climate Resilience Evaluation and Assessment Tool) suggests the consequence of a significant flood event ranges from \$3.5 - \$6.7 million

# Regulatory Questions

- \* How should the regulatory review address the “need” for a new generational facility?
  - \* Local input?
  - \* Evidence of triggering events?
- \* What strategies or tools could be used to mitigate the rate implications of a major addition to rate base?
  - \* Cost of service adjustments
  - \* Low income assistance programs
